

**ABSTRACT**

A method for preparing a lotion for reliable high speed processing onto a substrate. The method comprises the steps of providing a carrier system; mixing a premix solution of concentrated premix solution of a solid skin treatment agent in a solvent at a temperature of at least about 35 degrees C., and milling the premix solution into the carrier system at a temperature  
5 of at least about 35 degrees C to disperse the premix solution until an average droplet diameter of the dispersed premix solution is less than about 100 microns. Also disclosed are disposable absorbent articles comprising a lotion of the present invention.
